Email: cherrick@valleycountyid.gov

STAFF REPORT: SUB 26-008 Serenity Fields Subdivision – Preliminary Plat
MEETING DATE: June 11, 2026
TO: Planning and Zoning Commission
STAFF: Cynda Herrick, AICP, CFM
Planning and Zoning Director
**APPLICANT /
PROPERTY OWNER:** Serenity Fields LLC, c/o Jennifer Porter
495 Deinhard Lane #1810, McCall, ID 83638
ENGINEER: Rob Pair, Crestline Engineering
PO Box 2330, McCall, Idaho 83638
SURVEYOR: Dunn Land Surveying
25 Coyote Trail, Cascade, ID 83611
LOCATION: 14091 Highway 55
Part of parcel RP18N03E281774 located in the S ½ Section 28,
T.18N, R.3E, Boise Meridian, Valley County, Idaho
SIZE: 10.5 acres
REQUEST: Single-Family Residential Subdivision – 4 Residential Lots
EXISTING LAND USE: Single-Family Residential Parcel with a Residence and approved
CUP 24-15 for Multiple Residences

Serenity Fields LLC is requesting a conditional use permit for a four-lot single-family residential subdivision on 10.5 acres. Lots would range in size from 1.6 acres to 5.6 acres.

Individual well and septic are proposed.

Access would be from a new private gravel road onto Highway 55. This road would replace the existing driveway.

The site was approved for a conditional use permit for seven multiple residences on one parcel (CUP 24-15). Only one has been built at this time. The subdivision approval and recordation of a final plat would terminate CUP 24-15.

A Wildland Urban Interface Fire Protection Plan (short form) was submitted. The application states there are no wetlands on the site.

FINDINGS:

1. A neighborhood meeting is not required for a 4-lot subdivision (VCC 9-5H-1.D).

2. A pre-application meeting was held with Staff on March 24, 2026.
3. The application was received on March 30, 2026. The WUI plan was submitted on April 9, 2026.
4. The site is within one mile of the McCall City Limits. Therefore, the City of McCall was sent the application and preliminary plat for review on April 3, 2026, as required by Valley County Code 10-1-4. The application was emailed to City Clerk BessieJo Wagner, Community & Economic Development Director Michelle Groenevelt, City & Sustainability Planner Meredith Todd, Planning & Building Specialist Rachel Santiago-Govier, GIS Program Manager Yoram Terleth, McCall Airport Manager Emily Hart, and Ryan Garber, McCall Fire Department.
5. Legal notice was posted in the *Star News* on May 21, 2026, and May 28, 2026. The applicant was notified by letter on May 11, 2026. Potentially affected agencies were notified on May 12, 2026. Property owners within 300 feet of the property line were notified by fact sheet sent by mail on May 12, 2026. The notice was posted online at www.co.valley.id.us on May 12, 2026. The site was posted on May 20, 2026.

6. Additional Information from Applicant:

Jennifer Porter, representing the applicant, submitted:

- An email with questions about WUI Plan, a pond, and road standards. (April 8, 2026)
- An email regarding the irrigation water rights for the property. They are working with Lake Irrigation District Board on proposed allocation of the existing water rights. (May 22, 2026)

7. Agency comment received:

Brent Copes, Central District Health, stated an application has been received and fees paid. Test holes with an engineer present, possible ground water monitoring, and engineering documents are required. (May 17, 2026)

Ryan Garber, McCall Fire & EMS, stated it appears the applicant has addressed all concerns from the Fire District, which includes appropriate access road with turnaround, 10,000-gallon water storage tank for fire suppression, and wildfire protection plan. (May 22, 2026)

Emily Hart, McCall Airport Manager, stated the site is 1.0 miles from Runway 34 end. It is in the Horizontal Surface. Pre-screening is recommended for required FAA 7460-1 submission for each homesite. Recommends additional soundproofing and notice of proximity to airport in the Airport Area along with risk of noise, fumes, and aircraft crash in CCRs. (April 6, 2026)

Kendra Conder, Idaho Transportation Department, stated an ITD access and encroachment permits will be required. (June 1, 2026)

Brandon Flack, Idaho Fish and Game Regional Technical Assistance Manager, submitted general recommendations for subdivisions, which include controlling pets, vegetative recommendations, prohibiting feeding of wildlife, riparian barriers around wetlands, pond requirements, and wildlife friendly fencing. (November 21, 2024)

Megan Myers, Valley County Communications Supervisor, and Kathy Riffie, Valley County Cadastral Specialist Technician II, approve the road name Serenity Fields Lane. (May 5, 2026)

Paul Ashton, Parametrix and Valley County Engineer, stated detailed site grading and drainage plans and drainage design documentation will be required. BMPs are required. The private road shall meet criteria required by Valley County, including paving the first 30-ft of connection to HWY 55 and maintaining a 70-ft right-of-way with 35-ft minimum on each side of the roadway centerline. Traffic impact study is not required; however, a development agreement may be. (June 3, 2026)

Idaho Department of Environmental Quality (DEQ) provided general comments on air quality, wastewater, drinking water, surface water, solid waste, hazardous waste, water quality, ground water contamination, and best management practices. (May 26, 2026)

No comment from the City of McCall.

8. Public comment received: None
9. Physical characteristics of the site: Relatively flat; Clara Foltz Irrigation Ditch along southern boundary of parcel; berm along Highway 55; and grass-covered field with existing landscaped home.
10. The surrounding land use and zoning includes:
 - North: Single-Family Residential Parcel
 - South: Remainder of Parcel; Agricultural (Irrigated Pasture) with Homesite and Single-Family Residential Parcel
 - East: Single Family Residential Parcel, IDA-HOE Backhoe Service (CUPs 15-11 and 18-01) and Elk Creek Baptist Church (CUPs 01-09, 05-46, 18-04)
 - West: Single-Family Residential Lots (360° Ranch) and Single-Family Residential Parcel with CUP 21-02 Multiple Residences and CUP 21-31 Hamblin Sawmill)
9. Valley County Code (Title 9): In Table 9-3-1, this proposal is categorized under:
 - 2. Residential Uses (c) Subdivision for single-family subdivision.

Review of Title 7-1 McCall Area of City Impact, Title 9 - Chapter 5 Conditional Uses, and Title 10 Subdivision Regulations should be done.

TITLE 9 LAND USE AND DEVELOPMENT

9-1-10 DEFINITIONS

Lot Coverage: That portion of a lot that is occupied by the principal building and its accessory buildings, including overhangs, along with any structures requiring a building permit, and other impervious surfaces, such as driveways, patios, and accessory structures.

9-4-8: TABLE 4-A, STANDARDS FOR PERMITTED USES:

Use Description	Building Setbacks (feet)				Minimum Lot Area Acres	Max. Lot Cover	Minimum Street Frontage	Max. Building Height
	Front	Side	Side Street	Rear				
Residential Uses	20	7.5	20	20	Var.	35%	30 ft	35 ft

9-5-3: STANDARDS:

B. Setbacks:

1. Structures Exceeding Three Feet In Height: The setbacks for all structures exceeding three feet (3') in height are specified herein under the site and development standards for the specific use.
2. Highway 55: All structures shall be set back one hundred feet (100') from the right of way line of Highway 55 unless a more restrictive setback is required within other sections of this title.
3. High Water Line: All residential buildings shall be set back at least thirty feet (30') from high water lines. All other buildings shall be set back at least one hundred feet (100') from high water lines.
4. Front Yards: Front yards shall be determined by the structure establishing the principal use on the property and the location of the access street or road.
5. Encroachment On Yards: No other structure may encroach on the yards determined for the structure establishing principal use.
6. Measurement: All building setbacks shall be measured horizontally, on a perpendicular to the property line, to the nearest corner or face of the building including eaves, projections, or overhangs.

9-5A-1: GRADING:

- A. Permit Required: Grading to prepare a site for a conditional use or grading, vegetation removal, construction or other activity that has any impact on the subject land or on adjoining properties is a conditional use. A conditional use permit is required prior to the start of such an activity.
- B. Exemptions: Grading for bona fide agricultural activities, timber harvest, and similar permitted uses herein are exempt from this section.
- C. Flood Prone Areas: Grading within flood prone areas is regulated by provisions of section 9-6-2 of this title and title 11 of this code. A permit, if required, shall be a part of the conditional use permit.
- D. Wetlands: Grading or disturbance of wetlands is subject to approval of the U.S. Corps of Engineers under the federal clean water act. The federal permit, if required, shall be part of the conditional use permit.
- E. Site Grading Plan:
 1. The conditional use permit application shall include a site grading plan, or preliminary site grading plan for subdivisions, clearly showing the existing site topography and the proposed final grades with elevations or contour lines and specifications for materials and their placement as necessary to complete the work. The plan shall demonstrate compliance with best management practices for surface water management for permanent management and the methods that will be used during construction to control or prevent the erosion, mass movement, siltation, sedimentation, and blowing of dirt and debris caused by grading, excavation, open cuts, side slopes, and other site preparation and development. The plan shall be subject to review of the county engineer and the soil conservation district. The information received from the county engineer, the soil conservation district, and other agencies regarding the site grading plan shall be considered by the planning and zoning commission and/or the board of county commissioners in preparing the conditions of approval or reasons for denial of the applications. The Valley County Engineer or assigns shall approval all site grading and stormwater management plans prior to earthwork being don on-site.
 2. For subdivisions, preliminary site grading plans and stormwater management plans must be presented for review and approval by the commission as part of the conditional use permit application. However, prior to construction of the infrastructure, excavation, or recordation of the final plat, the final plans must be approved by the county engineer or assigns.
 3. For purposes of sizing stormwater basin permanent management facilities (excluding first flush water quality treatment facilities), Drainage Peak Flow Calculations shall use the Soil Conservation Service (SCS) method as preferred, but the Rational Method is acceptable for smaller areas (generally 100 acres or less). See VCC 9-6-6C for requirements that apply to detention basins within the Riparian Area Overlays.
 - a. Public Roads Require: 100-yr storm event for major roads, bridges, etc. and 50-year for all other facilities.
 - b. Private Roads Require: 100-yr storm event for major roads, bridges, etc. and 25-year event for all other facilities.
 - c. Site Development not directly specified shall use the 25-year storm event.

- F. Land Surfaces Not Used For Roads, Buildings And Parking: All land surfaces not used for roads, buildings and parking shall be covered either by natural vegetation, other natural and undisturbed open space, or landscaping.
- G. Stormwater Management Plan: Prior to issuance of building permits, the administrator must receive a certification from the developer's engineer verifying that the stormwater management plan has been implemented according to approved plans.
- H. Riparian Area Overlay: Grading within the Riparian Area Overlay is regulated by provisions of section 9-6-6 of this title. A permit, if required, shall be part of the conditional use permit.

9-5A-2: ROADS AND DRIVEWAYS:

- A. Roads For Public Dedication And Maintenance: Roads for public dedication and maintenance shall be designed and constructed in accordance with title 10 of this code and in accordance with "Construction Specifications And Standards For Roads And Streets In Valley County, Idaho".
- B. Access Roads Or Driveways: Residential developments, civic or community service uses, and commercial uses shall have at least two (2) access roads or driveways to a public street wherever practicable.
- C. Private Roads: Private roads shall meet the provisions of the Valley County subdivision ordinance and any policies adopted by the board of county commissioners.
- D. Cattle Guards: Cattle guards shall not be installed in public roads within residential developments.
- E. Access To Highway 55: Access to Highway 55 shall be limited at all locations and may be prohibited where other access is available. An access permit from the Idaho transportation department may be required.

9-5A-4: LANDSCAPING:

9-5A-5: FENCING:

- C. Livestock In Residential Development: If livestock are allowed in a residential development, then fencing shall be installed to keep livestock out of public street rights of way. Cattle guards shall not be installed in public roads within residential developments.
- E. Construction And Materials: Fence construction and materials shall be in accordance with commonly accepted good practices to produce a neat appearing durable fence. The location, height, and materials used for constructing a fence shall be approved by the commission and specified in the conditional use permit. Fences required for any conditional use shall be maintained in good repair.
- F. Conditional Use Adjoins Agricultural Uses: Where a conditional use adjoins an agricultural use where animal grazing is known to occur for more than thirty (30) consecutive days per year, the permittee shall cause a fence to be constructed so as to prevent the animals from entering the use area. The permittee shall provide for the maintenance of said fence through covenants, association documents, agreement(s) with the adjoining owner(s), or other form acceptable to the commission prior to approval of the permit so that there is reasonable assurance that the fence will be maintained in functional condition so long as the conflicting uses continue.
- G. Obstruction Of Vision: Sight obscuring fences, hedges, walls, latticework, or screens shall not be constructed in such a manner that vision necessary for safe operation of motor vehicles or bicycles on or entering public roadways is obstructed.

9-5A-6: UTILITIES:

- A. Direct Access Required: All lots or parcels, for or within conditional uses, shall be provided, or shall have direct access to, utility services including telephone, electrical power, water supply, and sewage disposal.
- B. Central Water Supply And Sewage Systems: Central water supply and sewage systems serving three (3) or more separate users shall meet the requirements of design, operation, and maintenance for central water and sewage systems in the subdivision ordinance.

- C. Probability Of Water Supply: Probability of water supply, as referred to in subsection A of this section, can be shown by well logs in the general area or by a determination of a professional engineer, hydrologist, or soil scientist.
- D. Individual Septic Systems: If individual septic systems are proposed to show compliance with sewage disposal requirements in subsection A of this section, sanitary restrictions must be lifted on every lot prior to recordation unless it is designated as a lot where a building permit will never be issued for a residential unit, such as pasture lot, common area, open space, or a no build lot.
- E. Easements Or Rights Of Way: Easements or rights of way shall be set aside or dedicated for the construction and maintenance of utilities in accordance with the provisions of the subdivision ordinance.
- F. Utility Plan: A utility plan showing the schedule of construction or installation of proposed utilities shall be a part of the conditional use permit.

9-5B-2: LIGHTING

9-5B-4: EMISSIONS:

- C. Wood Burning Devices: Wood burning devices shall be limited to one per site. Wood burning devices shall be certified for low emissions in accordance with EPA standards.

9-5C-2: MINIMUM LOT AREA:

- B. New Subdivisions:
 - 1. Single-Family Residences: New subdivisions for single-family residences shall provide the following minimum lot sizes:
 - a. One acre where individual sewage disposal systems and individual wells are proposed.
- C. Frontage On Public Or Private Road: Frontage on a public or private road shall not be less than thirty feet (30') for each lot or parcel. The lot width at the front building setback line shall not be less than ninety feet (90').

9-5C-5: SITE IMPROVEMENT:

- A. Off Street Parking Spaces: Two (2) off street parking spaces shall be provided for each dwelling unit. These spaces may be included in driveways, carports, or garages.
- B. Utility Lines: All utility lines, including service lines, that are to be located within the limits of the improved roadway in new residential developments must be installed prior to placing the leveling coarse material.

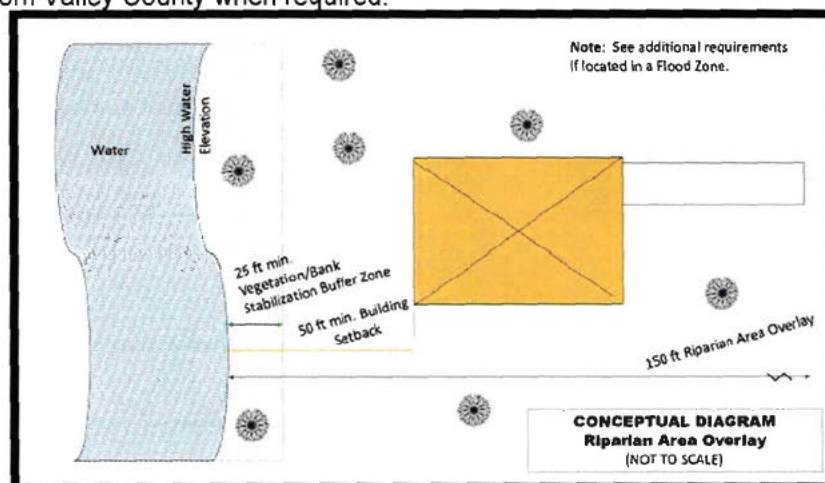

9-5C-6: DENSITY:

- A. The density of any residential development or use requiring a conditional use permit shall not exceed two and one-half (2.5) dwelling units per acre, except for planned unit developments or long-term rentals. Long-term rental density can be determined by the Planning and Zoning Commission in regards to compatibility with surrounding land uses and will require a deed restriction.
- B. Density shall be computed by dividing the total number of dwelling units proposed by the total acreage of land within the boundaries of the development. The area of existing road rights of way on the perimeter of the development and public lands may not be included in the density computation.

9-6-6: Riparian Area Overlay

- A. Purpose: The purpose of this special overlay is to protect the health and safety of the public, and to minimize damage to property and fragile ecologies by preventing surface and ground water pollution along with protection of waterbodies. It will also serve to protect water quality.
- B. Areas of Application: The standards and procedures for riparian areas shall apply to those lands which are within 150 feet of any lake, pond, river, or year-round flowing creek or stream.
- C. Standards:
 - 1. Setback shall be 50' from high water line for residential buildings and appurtenant structures and 100' for all other buildings and appurtenant structures. If a lot was platted prior to adoption of this standard and there is no area to construct, a variance may be granted by administrators if runoff

- control measures as prepared by the applicant are recommended for approval by the Valley County Engineer based on stormwater standards.
2. Prior to any excavation or construction, the property owner, general contractor or the responsible party shall provide proof of stormwater certification training or responsible person training. Training and certification must be on an approved training provider list that can be obtained at the Valley County Building Department.
 3. Stormwater detention basins, retention basins, swales or other techniques shall be used when recommended or required by the Valley County Engineer.
 - a. Basins must be designed and sized to filter or infiltrate runoff from the construction site and permanent drainage.
 - b. Basins must be designed to accommodate the "first-flush" volume sized to capture the runoff from the initial rainfall depth most responsible for pollutant loading. The "first-flush" volume design storm depth is defined herein as 0.77-inch of rainfall (24-hour 95th-percentile storm).
 - c. For purposes of sizing stormwater basin permanent management facilities (excluding first flush water quality treatment facilities), Drainage Peak Flow Calculations shall use the Soil Conservation Service (SCS) method as preferred, but the Rational Method is acceptable for smaller areas (generally 100 acres or less)
 - d. The storm duration is a 1-hour event when using the Rational Method, or a 24-hour event when using the SCS method.
 - e. Basin design shall be approved by the Valley County Engineer and inspected by the Valley County building department or other qualified inspectors assigned to such duties. Special inspections may be needed in some instances. The applicant's engineer shall also submit a certification that the approved plan was implemented prior to final occupancy.
 - f. Basin design shall comply with Idaho Department of Water Resources (IDWR) water rights requirements.
 4. There shall be no filling or dredging of lake bottoms, rivers, or wetlands without proper jurisdictional permits, i.e. IDWR, USACE, Valley County, etc.
 5. There shall be no excessive clearing of vegetation.
 6. Stormwater harvest and infiltration techniques are encouraged.
 7. Riprap for shoreline protection is allowed with the proper turbidity controls and permits from appropriate jurisdictions (IDWR, USACE, USBR, IDL, etc), including a Floodplain Development Permit from Valley County when required.

100' ft min. Building Setback for all other buildings.

TITLE 10 SUBDIVISION REGULATIONS

10-4-3: LOTS:

- A. Size, Depth, Shape, Orientation And Setback Lines: The lot size, width, depth, shape and orientation, and the minimum building setback lines shall be appropriate for the location of the subdivision and for the type of development and use contemplated. Every lot shall abut upon a street. Corner lots for

residential use shall have extra width to permit appropriate building setbacks from, and orientation to, both streets.

- B. Double Frontage And Reverse Frontage Lots: Double frontage, and reverse frontage lots, shall be avoided, except where essential to provide separation of residential development from traffic arteries or to overcome specific disadvantages of topography and orientation. A screening easement of at least ten feet (10'), and across which there shall be no right of access, shall be provided along the line of lots abutting such a traffic artery or other disadvantageous use.
- C. Side Lot Lines: Side lot lines shall be within twenty degrees (20°) of right angles or radial to street lines.

10-4-6: EASEMENTS:

- A. Utility Easements: There shall be provided easements for the utilities upon and across the front of lots of a width of a minimum of twelve feet (12') (except for entrance service) or as and where considered necessary by the commission.
- B. Stormwater Easement Or Drainage Right Of Way: Where a subdivision is crossed or bounded by a watercourse, drainageway, channel, irrigation ditch, or stream there shall be provided a stormwater easement or drainage right of way conforming substantially with the lines of such watercourse, and such further width or construction, or both, as will be adequate for the purpose.
- C. Drainage: Provisions for adequate drainage shall be made by the subdivider as prescribed by the county engineer in accordance with the manual containing the drainage standards and specifications as adopted by Valley County.
- D. Existing Easements: All existing easements must be shown on the subdivision plat.

10-5-1: STREET AND UTILITY IMPROVEMENTS:

- A. Installation Required: Public street, utility, conduit for fiber optics, and other off site improvements, as hereinafter listed, shall be installed in each new subdivision at the subdivider's expense or at the expense of the party agreeing to install the same, in accordance with the minimum standards set forth below prior to the acceptance of any final plat for recordation, except as provided in subsections C and D of this section. A right of way permit will be required (see section 5-7-2 of this code).
- B. Acceptance By County: The county shall not accept the dedication of any public rights of way and any easements shown on the plat, together with appurtenant facilities lying therein which the county would have a duty to maintain after dedication, which are not improved, or construction thereof guaranteed in accordance with the provisions of this title or with the policies, standards, designs and specifications set forth in the road and street specifications adopted by Valley County. The Valley County Board of Commissioners have the sole discretion to set the level of service for any public road; the level of service can be changed. All plats shall contain in their notes this statement: "The Valley County Board of Commissioners have the sole discretion to set the level of service for any public road; the level of service can be changed."

Dedication of public rights-of-way does not guarantee that the public road will be maintained by Valley County. Public rights of way are allowed with roads that are maintained by homeowners. Public rights of way shall be provided through properties to adjacent lands for the purpose of circulation, when reasonable.

- C. Private Road Declaration: In the event that private roads, streets and ways are shown on a subdivision plat, the width of the right of way must meet specifications set forth in road and street specifications adopted by the board of county commissioners. A private road declaration shall be recorded and state that the county will have no responsibility for the installation or maintenance of the private roads, shall describe who is responsible for maintenance of the private roads, and describe the construction schedule for the private roads. Construction of private roads shall be the responsibility of the subdivider and shall be constructed to the minimum standards as set forth in the road and street specifications for private roads adopted by the county.
- D. Declaration Of Installation Of Utilities: A declaration of installation of utilities shall also be recorded. The declaration shall describe the utilities that will be placed by the subdivider, verify when the utilities will be installed and state that Valley County will have no responsibility for the installation or

maintenance of utilities. If all utilities are not installed prior to recordation of the plat, a note shall be placed on the face of the plat that states: "Utilities have not been installed at the time of recordation of this plat".

- E. **Connection To Public Road Required:** The county shall not accept any new subdivision unless the streets within the subdivision, whether public or private, are connected directly to an existing public road. In the event the subdivision is not connected to a public road with an approved minimum standard as determined by the Valley County Road Director, then the subdivider shall construct, or guarantee the construction as provided by this title, a connector road to county standards, either private roads or public roads, which shall provide access to the subdivision. All subdivisions shall be required to be accessed by a road system that meets the minimum standard as determined by the Valley County Road Director. When access has historically been provided through the subdivision to other ownerships, the subdivider shall provide for continuation of the public right of way.

CHAPTER 7 WILDLAND URBAN INTERFACE FIRE PROTECTION PLAN

10-7-2: DEFINITIONS

FORESTED: Idaho Code title 38, chapter 1 (Idaho forestry act) defines "forestland" as meaning "any land which has upon it sufficient brush or flammable forest growth of any kind or size, living or dead, standing or down, including debris or growth following a fire or removal of forest products, to constitute a fire menace to life (including animal) or property".

10-7-4: SUBMISSION REQUIREMENTS:

- A. **General:** All developers of proposed subdivisions shall provide a wildland urban interface fire protection plan (the plan) for review and approval by the planning and zoning commission with their preliminary plat application or planned unit development submittal. The plan shall be submitted to the Wildfire Mitigation Director by Planning and Zoning Staff for review and comments to the Planning and Zoning Commission.
- B. **Content:** The plan shall be based upon a site specific wildfire risk assessment that includes consideration of location, topography, aspect, flammable vegetation, climatic conditions and fire history. The plan shall address water supply, access, fire protection systems and equipment, defensible space, and vegetation management.
1. **Preparation:** The plan shall be developed by a "professional" (see definition in section [10-7-2](#) of this chapter). Professionals can be prequalified by the commission and a list will be maintained at the Valley County planning and zoning office.
 3. **Submittal, Implementation And Verification:**
 - a. The plan shall be submitted with the preliminary plat application to the Valley County planning and zoning office.
 - b. Planned mitigation work must be completed or financially guaranteed prior to the recordation of the final plat. A schedule for the phased completion of mitigation work may be approved in conjunction with recordation of final plats.
 - c. Verification of completed implementation of mitigation actions will be the responsibility of the jurisdictional structural fire district. Where no structural fire district exists, the Valley County sheriff shall appoint a county representative. Each authority will act in conjunction with the Wildfire Mitigation Director.
 4. **Exceptions:** Proposed administrative plats of less than five (5) lots and proposed subdivisions with lands less than twenty percent (20%) "forested" (see definition in section [10-7-2](#) of this chapter) are exempt from the professional requirement. For proposed subdivisions fitting these descriptions, the developer may complete the plan (see the fire protection form). The plan for an administrative plat can be approved by the administrator upon receiving an approval letter from the Valley County Wildfire Mitigation director in conjunction with the applicable fire district.
 5. **Cost:** The cost and implementation of the plan preparation shall be the responsibility of the applicant.
 6. **Plan Retention:** The approved plan shall be retained at the Valley County planning and zoning office and the jurisdictional fire district or designated agency where no fire district exists.
-

SUMMARY:

Staff's compatibility rating is a + 25.

The Planning and Zoning Commission should do their own compatibility rating prior to the meeting (form with directions attached). Be prepared to submit your compatibility rating or state which lines on staff's compatibility rating needs to be changed.

STAFF COMMENTS / QUESTIONS:

1. This site is within the McCall Fire District, Water District 65, the Lake Fork Irrigation District, and a herd district. It is within one mile of the McCall City boundary but not within the designated Impact Area.
2. The preliminary plat states that the property area is 10.503 acres; however, this does not include the 1.442 acres for the private road. The proposal does meet density maximums.
3. The preliminary plat and application should have included part of the NESW of Section 28 in the title.
4. Well logs were not included in the application submittals.
5. The preliminary plat shows building envelopes with stricter setbacks than typically required by Valley County Code. CUP 24-15 Multiple Residences required 30-ft front/rear and 15-ft side setbacks because it was a residential use approved as a conditional use permit.
6. Preliminary Plat Note 3 states no telephone or internet services will be provided to the lots. **The applicant will need to place conduit for fiber optics with power and/or construction of the road.**
7. If the plat is approved and recorded, remainder pieces of both RP18N03E281774 and RP18N03E284805 shall be combined through the Assessor's Office. The remainder pieces would only be eligible for one residential building permit.
8. Has the applicant discussed with ITD changing the access onto Highway 55 from a driveway to a private road?

Question to P&Z Commission:

1. Does this subdivision meet the minimum standards in Title 9, Chapter 5, of the Valley County Code in regards to frontage, lot size, etc.? If not, which ones does it not comply with?
2. Does this subdivision meet the minimum standards in Title 10 of the Valley County Code in regards to the access road, etc.?
3. Are impacts being properly mitigated? If not, which impacts are not mitigated?

Standard of Approval:

1. Will the application result in an increase in value of private property? VCC 9-5-2(B)(3).
2. Will the approval of the application result in an undue adverse impact on the environment? VCC 9-5-2(B)(3).

3. Will the approval of the application result in an undue adverse impact on adjoining properties? VCC 9-5-2(B)(3).
4. Will the approval of the application result in an undue adverse impact on governmental services? VCC 9-5-2(B)(3).
5. Is the application consistent with the Valley County Comprehensive Plan? VCC 9-5-2(B)(3).
6. Conditional uses may be approved only after a C.U.P. has been evaluated to determine that the impacts can be mitigated through conformance with conditions of approval. VCC 9-5-2(A).

These six standards should be a significant focus of attention during the public hearing and deliberations because they need to be resolved in order to justify approval. VCC 9-5-1(C) directs the decision-making body to encourage conditional uses where noncompatible aspects of the application can be satisfactorily mitigated through development agreements for the costs to service providers and impacts to surrounding land uses. Because mitigation measures are a requirement of approval the applicant needs to understand that he/she will be required to perform some off-site improvements. They are not mandatory but without them the application cannot satisfy the mitigation of impacts requirement and would be denied under the ordinance.

Proposed Conditions of Approval

1. The application, the staff report, and the provisions of the Land Use and Development Ordinance are all made a part of this permit as if written in full herein. Any violation of any portion of the permit will be subject to enforcement and penalties in accordance with Title 9-2-5; and, may include revocation or suspension of the conditional use permit.
2. Any change in the nature or scope of land use activities shall require an additional Conditional Use Permit.
3. The issuance of this permit and these conditions will not relieve the applicant from complying with applicable County, State, or Federal laws or regulations or be construed as

permission to operate in violation of any statute or regulations. Violation of these laws, regulations or rules may be grounds for revocation of the Conditional Use Permit or grounds for suspension of the Conditional Use Permit.

4. Must have an approved storm water management plan and site grading plan approved by the Valley County Engineer prior to any work being done on-site. The fee for engineering review shall be reimbursed at 105%.
5. The final plat shall be recorded within two years, or this permit will be null and void.
6. Sanitary Restrictions must be removed by Central District Health prior to recording the final plat.
7. A letter of approval is required from McCall Fire District for the final plat.
8. A letter of approval of the Wildland Urban Interface Fire Protection Plan is required from the Valley County Wildfire Mitigation Director or assignee prior to recording the plat.
9. The location of the water storage tank for emergency response must be noted on the final plat.
10. The Declaration of Utilities shall include a maintenance agreement for the water tank for fire protection.
11. Prior to recordation of the plat, the Developer's engineer shall certify that the road is constructed in accordance with the plans approved by the Valley County Engineer, or the infrastructure shall be financially guaranteed.
12. A deed transferring ownership of the private roads to lot owners or homeowner association shall be recorded with the final plat.
13. Fertilizer on lawns shall be wildlife friendly and not contribute to degradation of water quality.
14. Shall place addressing numbers at the residence and at the driveway entrance if the house numbers are not visible from the road. Said numbers shall contrast with their background and be at least three and one-half inches (3 ½-in) height.
15. Must have a fencing plan with neighboring properties if they run livestock for over 30 days per year.
16. All easements shall be shown on the final plat.
17. Shall contact McCall U.S.P.S. Postmaster to determine appropriate location of a Cluster Box Unit for mail delivery to this development.
18. Standard Plat Notes shall be included on the final plat.
19. CCR's, if recorded, shall include Standard Conditions of Approval for CCRs.
20. The berm along Highway 55 must be contoured, the slope cannot be more than a 3:1 slope, the noxious weeds must be eradicated, and it must be planted prior to November 1, 2026.

END OF STAFF REPORT

Compatibility Questions and Evaluation

Matrix Line # / Use: _____

Prepared by: _____

YES/NO X Response Value

Use Matrix Values:

(+2/-2) _____ X 4 _____

1. Is the proposed use compatible with the dominant adjacent land use?

(+2/-2) _____ X 2 _____

2. Is the proposed use compatible with the other adjacent land uses (total and average)?

(+2/-2) _____ X 1 _____

3. Is the proposed use generally compatible with the overall land use in the local vicinity?

Site Specific Evaluation (Impacts and Proposed Mitigation)

(+2/-2) _____ X 3 _____

4. Is the property large enough, does the existence of wooded area, or does the lay of the land help to minimize any potential impacts the proposed use may have on adjacent uses?

(+2/-2) _____ X 1 _____

5. Is the size or scale of proposed lots and/or structures similar to adjacent ones?

(+2/-2) _____ X 2 _____

6. Is the traffic volume and character to be generated by the proposed use similar to the uses on properties that will be affected by proximity to parking lots, on-site roads, or access roads?

(+2/-2) _____ X 2 _____

7. Is the potential impact on adjacent properties due to the consuming or emission of any resource or substance compatible with that of existing uses?

(+2/-2) _____ X 2 _____

8. Is the proposed use compatible with the abilities of public agencies to provide service or of public facilities to accommodate the proposed use demands on utilities, fire and police protection, schools, roads, traffic control, parks, and open areas?

(+2/-2) _____ X 2 _____

9. Is the proposed use cost effective when comparing the cost for providing public services and improving public facilities to the increases in public revenue from the improved property?

Sub-Total (+) _____

Sub-Total (-) _____

Total Score _____

The resulting values for each questions shall be totaled so that each land use and development proposal receives a single final score.

9-11-1: APPENDIX A, COMPATIBILITY EVALUATION:

- A. General: One of the primary functions of traditional zoning is to classify land uses so that those which are not fully compatible or congruous can be geographically separated from each other. The county has opted to substitute traditional zoning with a multiple use concept in which there is no separation of land uses. Proposed incompatible uses may adversely affect existing uses, people, or lands in numerous ways: noise, odors, creation of hazards, view, water contamination, loss of needed or desired resources, property values, or infringe on a desired lifestyle. To ensure that the county can continue to grow and develop without causing such land use problems and conflicts, a mechanism designed to identify and discourage land use proposals which will be incompatible at particular locations has been devised. The compatibility evaluation of all conditional uses also provides for evaluations in a manner which is both systematic and consistent.
- B. Purpose; Use:
1. The compatibility rating is to be used as a tool to assist in the determination of compatibility. The compatibility rating is not the sole deciding factor in the approval or denial of any application.
 2. Staff prepares a preliminary compatibility rating for conditional use permits, except for conditional use permits for PUDs. The commission reviews the compatibility rating and may change any value.
- C. General Evaluation: Completing the compatibility questions and evaluation (form):
1. All evaluations shall be made as objectively as possible by assignment of points for each of a series of questions. Points shall be assigned as follows:
 - Plus 2 - assigned for full compatibility (adjacency encouraged).
 - Plus 1 - assigned for partial compatibility (adjacency not necessarily encouraged).
 - 0 - assigned if not applicable or neutral.
 - Minus 1 - assigned for minimal compatibility (adjacency not discouraged).
 - Minus 2 - assigned for no compatibility (adjacency not acceptable).
 2. Each response value shall be multiplied by some number, which indicates how important that particular response is relative to all the others. Multipliers shall be any of the following:
 - x4 - indicates major relative importance.
 - x3 - indicates above average relative importance.
 - x2 - indicates below average relative importance.
 - x1 - indicates minor relative importance.
- D. Matrix - Questions 1 Through 3: The following matrix shall be utilized, wherever practical, to determine response values for questions one through three (3). Uses classified and listed in the left hand column and across the top of the matrix represent possible proposed, adjacent, or vicinity land uses. Each box indicates the extent of compatibility between any two (2) intersecting uses. These numbers should not be changed from proposal to proposal, except where distinctive uses arise which may present unique compatibility considerations. The commission shall determine whether or not there is a unique consideration.
- E. Terms:
- DOMINANT ADJACENT LAND USE: Any use which is within three hundred feet (300') of the use boundary being proposed; and
1. Comprises at least one-half (1/2) of the adjacent uses and one-fourth (1/4) of the total adjacent area; or
 2. Where two (2) or more uses compete equally in number and are more frequent than all the other uses, the one with the greatest amount of acreage is the dominant land use; or
 3. In all other situations, no dominant land use exists. When this occurs, the response value shall be zero.
- LOCAL VICINITY: Land uses within a one to three (3) mile radius. The various uses therein should be identified and averaged to determine the overall use of the land.
- F. Questions 4 Through 9:
1. In determining the response values for questions 4 through 9, the evaluators shall consider the information contained in the application, the goals and objectives of the comprehensive plan, the provisions of this title and related ordinances, information gained from an actual inspection of the site, and information gathered by the staff.
 2. The evaluator or commission shall also consider proposed mitigation of the determined impacts. Adequacy of the mitigation will be a factor.

Subject: Questions about Serenity Fields Subdivision
To: Cynda Herrick <cherrick@valleycountyid.gov>

Hi Cynda!
Hope you are enjoying your week.

We had a few questions we are hoping you could help us get pointed in the right direction.

First, it looks like I didn't know that I needed a separate wildland fire protection plan other than the fire mitigation part of the application we had filled out but according to the email I received from Lori, it was not included. I have attached a copy of the form I filled out the best I could. Would you have a few moments to look at it and let me know if it looks like I have met the requirements or if there is any missing information I still need to send? I'm thinking since the preliminary plat map has information about and shows the location of a 10,000 gallon water tank we will have, I'm hoping that would be sufficient to help with the wildland fire protection plan. This map also shows the private road access and width and the topography of the proposed lots and surrounding land.

Please let me know if I need anything more concerning this form or paperwork. We were really counting on getting this completed as soon as possible for our family and we were really working hard to meet deadlines and get on the schedule for the May hearing. Is that at all still possible?

Second, for a few years now, we have been considering building a pond on our acreage where the ground all slopes towards that particular lower area. We have discussed with the fire department the possibility of using it for fire mitigation. We would like to know where and how we would go about obtaining a permit and review the current requirements for a pond so we could understand the proper way building a pond should be done and if it is something that would fit in our budget sooner than later.

Third, we are wondering if it is possible to improve our driveway without the substantial engineering costs involving an engineer at this point? Our current drive and ground is fairly level where we would be upgrading and improving our current 20' wide driveway to a 28' wide private road including a minimum 60' hammerhead to accommodate emergency and fire vehicle access. We will be using Clayton Simpson who works with us as our current excavator to upgrade, build and improve our current drive to meet the current private road standards.

Please let us know your thoughts. Your help is greatly appreciated!

Thank you,
Jennifer

Subject: RE: SUB 26-008 Serenity Fields Subdivision Water Rights Coordination

Hi Cynda,

Thank you for checking in regarding the irrigation water rights associated with the proposed Serenity Fields subdivision.

We are currently working directly with the Lake Irrigation District Board regarding the proposed allocation of the existing water rights tied to the property.

The current property consists of approximately 29 acres with an existing allocation of 20 inches of irrigation water rights through the Lake Irrigation District.

As part of the proposed subdivision, we are requesting approval to allocate the water rights as follows:

- 2.5 inches of water rights allocated to the proposed 5.625-acre parcel (Lot 1), which contains the existing residence where we currently live (see attached Preliminary Plat).
- The remaining 17.5 inches of water rights to remain with the proposed 17.566-acre adjacent parcel, which is not part of the subdivision.

The three remaining proposed subdivision lots, each approximately 1.62 acres in size, will not receive any irrigation water rights allocation.

Following subdivision approval and recording, the 5.625-acre parcel and the 17.566-acre parcel will continue to receive and remain responsible for all future assessments associated with the allocated water rights through the Lake Irrigation District.

We will continue coordinating with the District and will provide any additional documentation or direction from the Board as it becomes available.

Thank you,

Jennifer Porter

Rezone # _____

Conditional Use # _____

Preliminary / Final / Short Plat _____

Sub 26-008 Serenity Fields Subdivision

- 1. We have No Objections to this Proposal.
- 2. We recommend Denial of this Proposal.
- 3. Specific knowledge as to the exact type of use must be provided before we can comment on this Proposal.
- 4. We will require more data concerning soil conditions on this Proposal before we can comment.
- 5. Before we can comment concerning individual sewage disposal, we will require more data concerning the depth of:
 - high seasonal ground water
 - waste flow characteristics
 - bedrock from original grade
 - other _____
- 6. This office may require a study to assess the impact of nutrients and pathogens to receiving ground waters and surface waters.
- 7. This project shall be reviewed by the Idaho Department of Water Resources concerning well construction and water availability.
- 8. After written approvals from appropriate entities are submitted, we can approve this proposal for:
 - central sewage
 - community sewage system
 - community water well
 - interim sewage
 - central water
 - individual sewage
 - individual water
- 9. The following plan(s) must be submitted to and approved by the Idaho Department of Environmental Quality:
 - central sewage
 - community sewage system
 - community water
 - sewage dry lines
 - central water
- 10. Run-off is not to create a mosquito breeding problem
- 11. This Department would recommend deferral until high seasonal ground water can be determined if other considerations indicate approval.
- 12. If restroom facilities are to be installed, then a sewage system MUST be installed to meet Idaho State Sewage Regulations.
- 13. We will require plans be submitted for a plan review for any:
 - food establishment
 - swimming pools or spas
 - child care center
 - beverage establishment
 - grocery store

14. Application has been received and fees paid. Test holes with an engineer present, ^{possible} ground water monitoring and engineering documents are required.

Subject: RE: SUB 26-008 Serenity Fields Subdivision - Preliminary Plat

Hi Lori,

SUB 26-008 is 1.0 mile from Runway 34 end. It is in the Horizontal Surface. Request pre-screening for each lot's homesite <https://oeaaa.faa.gov/oeaaa/oe3a/main/#/noticePrescreen>, and submittal of FAA Form 7460-1 if required by FAA.

Recommend additional soundproofing and notice of proximity to airport in the Airport Influence Area along with risk of noise, fumes, and aircraft crash in CCRs.

The property owner called me last week and we talked through the FAA pre-screening process.

Regards,
Emily

Development Application	SUB 26-008
Project Name	Serenity Fields Subdivision
Project Location	14091 Highway 55
Project Description	CUP for 4 Single-Family Lots
Applicant	Serenity Fields LLC

The Idaho Transportation Department (ITD) reviewed the referenced application(s) and has the following comments:

1. The applicant will be required to permit the access to SH-55 for multiple residences. This includes, but is not limited to, paving any portion of the approach that is within ITD's right-of-way. The approach will also need to meet certain geometric standards for a rural, multi-residential access.
2. Once civil plans have been drafted for work within ITD's right-of-way, the applicant will need to submit an encroachment permit application via our online permitting tool [here](#).
3. ITD reserves the right to make further comments upon review of the submitted documents.

If you have any questions, you may contact me at 208-334-8377.

Sincerely,

Kendra Conder

Thu 11/21/2024 10:00 AM

Hi Lori,

I got your voicemail. Hopefully this is what you were looking for. All of these won't apply to every residential development, e.g., not every subdivision will have a private pond where they need a water right from IDWR or a private pond permit from IDFG.

In general, IDFG recommends the following practices for residential subdivisions/developments:

- Residents should control pets, including cats, at all times (fenced yard, keep indoors, kenneled, leashed, etc.). Pets, at-large, dramatically increase a residential subdivision's negative effects on wildlife.
- Avoiding or minimizing the potential for wildlife depredations in a subdivision is the responsibility of the individual property owner.
 - Prohibit the feeding of wildlife and require that potential wildlife attractants (pet food, trash cans, gardens, hay stacks, bird feeders, etc.) be maintained in a way to reduce attraction of wildlife species (skunks, foxes, raccoons, magpies, big game, etc.).
 - For example, leaving livestock feed outside will attract big game animals. Make sure any feed is stored in a closed barn or shed.
 - The developer and individual homeowners should be made aware that ornamental plants can attract big game animals and they will eat those plants. Therefore, protecting ornamental plants is the responsibility of the individual property owner.
 - Yew species are highly toxic to wildlife, pets, and humans and should not be used as landscaping plants.
- Native vegetation should be retained to the extent possible during project implementation to support native birds, small mammals, and pollinator species.
- Retain buffers of riparian vegetation that surround any wetland resources on the project property.
- If ponds exist or are developed on the project property, legal water rights issued by the Idaho Department of Water Resources are required for the appropriate beneficial use (storage, irrigation, recreation, etc.). If the ponds will be used for fishing, a private pond permit from IDFG is required to stock the ponds with fish, and a live fish transport permit from IDFG may also be required.
- All fencing within and around the subdivision should be wildlife friendly. IDFG can provide additional details upon request.

Please let me know if you have additional questions.

Brandon Flack

700 South Main Street
PO Box 1350
Cascade, ID 83611

Re: June 11, 2026, Planning and Zoning Commission Agenda Items

Dear Cynda:

I have reviewed the items you requested us to review as listed on the June 11, 2026, Valley County (VC) Planning and Zoning Commission agenda and have the following comments for your consideration:

New Business:

1. SUB 25-019 Rocky Mountain Storage – Preliminary Plat

Not reviewed.

2. VAC 26-001 Boyer Vacation of Utility Easement

Not reviewed.

3. CUP 26-008 Troutner Multiple Residences

Not reviewed.

4. SUB 26-008 Serenity Fields Subdivision – Preliminary Plat

Detailed site grading and drainage plans and drainage design documentation signed by a licensed PE for the site improvements will be required for review and approval by the Valley County engineer. Additional stormwater resulting from site improvements will need to be retained on site and addressed in the design and calculations. Improvements to offsite drainage features may be required. Appropriate temporary and permanent best management practices (BMPs) and erosion control measures are required to protect adjacent properties, waterways, and roadway ditches.

The proposed private roadway shall meet the criteria outlined in the Valley County Minimum Standards for Private/Public Road Design and Construction, including paving the first 30 feet of the connection to SH-55 (coordinate with ITD) and maintaining a 70-ft right-of-way with 35 feet minimum on each side of roadway centerline.

Valley County requires a 100-foot setback from ITD ROW for any permanent structures (as shown on the preliminary plat).

A traffic impact study is not required for this 4-lot subdivision; however, a development agreement identifying public road impacts may be required.

5. SUB 26-007 Gestrin Grove Subdivision – Preliminary Plat

Detailed site grading and drainage plans and drainage design documentation signed by a licensed PE for the site improvements will be required for review and approval by the Valley

County engineer. Additional stormwater resulting from site improvements will need to be retained on site and addressed in the design and calculations. Improvements to offsite drainage features may be required. Appropriate temporary and permanent best management practices (BMPs) and erosion control measures are required to protect adjacent properties, waterways, and roadway ditches.

A traffic impact study is not required for this 4-lot subdivision; however, a development agreement identifying public road impacts may be required.

6. VAR 26-003 Rogers Cabin LLC Setback Variance

Not reviewed.

7. CUP 26-009 CM Backcountry Rentals Shop and Lodge Amendment of CUP 24-07

Not reviewed.

8. SUB 26-009 Paradise Cove II Subdivision – Preliminary Plat

Detailed site grading and drainage plans and drainage design documentation signed by a licensed PE for the site improvements will be required for review and approval by the Valley County engineer. Additional stormwater resulting from site improvements will need to be retained on site and addressed in the design and calculations. Improvements to offsite drainage features may be required. Appropriate temporary and permanent best management practices (BMPs) and erosion control measures are required to protect adjacent properties, waterways, and roadway ditches.

Improvements to Paradise Lane (private roadway) shall meet the criteria outlined in the Valley County Minimum Standards for Private/Public Road Design and Construction. Verify the right-of-way width with the Road and Bridge Department.

A traffic impact study is not required for this 4-lot subdivision; however, a development agreement identifying public road impacts may be required.

9. CUP 26-010 Time Construction and Management

Not reviewed.

10. CUP 26-011 Anderson Multiple Residences

Not reviewed.

11. VAR 26-004 Holden Setback Variance

Not reviewed.

12. CUP 26-012 Scheider Propane Storage

Not reviewed.

Please contact me if you have any questions.

Sincerely,

ParametriX

Subject: Valley County Planning and Zoning Public Hearing 6 11 2026

Dear Cynda Herrick:

Thank you for the opportunity to respond to your request for comment. While DEQ does not review every project on a project-specific basis, we attempt to provide the best review of the information provided. DEQ encourages agencies to review and utilize the Idaho Environmental Guide to assist in addressing project-specific conditions that may apply. This guide can be found at:

<https://www2.deq.idaho.gov/admin/LEIA/api/document/download/15083>.

The following information does not cover every aspect of this project; however, we have the following general comments to use as appropriate:

1. AIR QUALITY D6, D8, D11

- Please review IDAPA 58.01.01 for all rules on Air Quality, especially those regarding fugitive dust (58.01.01.651), trade waste burning (58.01.01.600-617), and odor control plans (58.01.01.776).
For questions, contact David Luft, Air Quality Manager, at (208) 373-0201.
- IDAPA 58.01.01.201 requires an owner or operator of a facility to obtain an air quality permit to construct prior to the commencement of construction or modification of any facility that will be a source of air pollution in quantities above established levels. DEQ asks that cities and counties require a proposed facility to contact DEQ for an applicability determination on their proposal to ensure they remain in compliance with the rules.
- For questions, contact the DEQ Air Quality Permitting Hotline at 1-877-573-7648.

AIR QUALITY C1, D3,D4, D7

- Please review IDAPA 58.01.01 for all rules on Air Quality, especially those regarding fugitive dust (58.01.01.651), and trade waste burning (58.01.01.600-617).
- For new development projects, all property owners, developers, and their contractors must ensure that reasonable controls to prevent fugitive dust from becoming airborne are utilized during all phases of construction activities per IDAPA 58.01.01.651.
- DEQ recommends the city/county require the development and submittal of a dust prevention and control plan for all construction projects prior to final plat approval. Dust prevention and control plans incorporate appropriate best management practices to control fugitive dust that may be generated at sites.

- Citizen complaints received by DEQ regarding fugitive dust from development and construction activities approved by cities or counties will be referred to the city/county to address under their ordinances.
- Per IDAPA 58.01.01.600-617, the open burning of any construction waste is prohibited. The property owner, developer, and their contractors are responsible for ensuring no prohibited open burning occurs during construction.
- For questions, contact David Luft, Air Quality Manager, at (208) 373-0550.

2. WASTEWATER AND RECYCLED WATER

- DEQ recommends verifying that there is adequate sewer to serve this project prior to approval. Please contact the sewer provider for a capacity statement, declining balance report, and willingness to serve this project.
- IDAPA 58.01.16 and IDAPA 58.01.17 are the sections of Idaho rules regarding wastewater and recycled water. Please review these rules to determine whether this or future projects will require DEQ approval. IDAPA 58.01.03 is the section of Idaho rules regarding subsurface disposal of wastewater. Please review this rule to determine whether this or future projects will require permitting by the local public health district.
- All projects for construction or modification of wastewater systems require preconstruction approval. Recycled water projects and subsurface disposal projects require separate permits as well.
- DEQ recommends that projects be served by existing approved wastewater collection systems or a centralized community wastewater system whenever possible. Please contact DEQ to discuss potential for development of a community treatment system along with best management practices for communities to protect groundwater.
- DEQ recommends that cities and counties develop and use a comprehensive land use management plan, which includes the impacts of present and future wastewater management in this area. Please schedule a meeting with DEQ for further discussion and recommendations for plan development and implementation.
- For questions, contact Valerie Greear, Water Quality Engineering Manager at (208) 373-0459.

3. DRINKING WATER

- DEQ recommends verifying that there is adequate water to serve this project prior to approval. Please contact the water provider for a capacity statement, declining balance report, and willingness to serve this project.
- DEQ recommends verifying if the current and/or proposed drinking water system is a regulated public drinking water system. A drinking water system is a Public Water System (PWS) if it has at least 15 service connections or regularly serves an average of 25 or more people per day for at least 60 days per year (refer to the DEQ website at: <https://www.deq.idaho.gov/water-quality/drinking-water/>). For non-regulated systems, DEQ recommends annual testing for total coliform bacteria, nitrate, and nitrite.
- IDAPA 58.01.08 is the section of Idaho rules regarding public drinking water systems. Please review these rules to determine whether this or future projects will require DEQ approval.
- All projects for construction or modification of public drinking water systems require preconstruction approval.
- If any private wells will be included in this project, we recommend that they be tested for total coliform bacteria, nitrate, and nitrite prior to use and retested annually thereafter.
- DEQ recommends using an existing drinking water system whenever possible or construction of a new community drinking water system. Please contact DEQ to discuss this project and to explore options to both best serve the future residents of this development and provide for protection of groundwater resources.

- DEQ recommends cities and counties develop and use a comprehensive land use management plan which addresses the present and future needs of this area for adequate, safe, and sustainable drinking water. Please schedule a meeting with DEQ for further discussion and recommendations for plan development and implementation.
- For questions, contact Valerie Greear, Water Quality Engineering Manager at (208) 373-0459.

4. SURFACE WATER

- A Construction General Permit from DEQ may be required for projects that meet the eligibility criteria and have an allowable discharge of storm water or authorized non-storm water associated with construction activities. For questions, contact Emily Montague, IPDES Compliance Supervisor, at (208) 813-0872.
- Please contact DEQ to determine whether this project will require an Idaho Pollutant Discharge Elimination System (IPDES) Permit. A Multi-Sector General Permit from DEQ may be required for facilities that have an allowable discharge of storm water or authorized non-storm water associated with the primary industrial activity and co-located industrial activity.
- For questions, contact Emily Montague, IPDES Compliance Supervisor, at (208) 373-0433.
- If this project is near a source of surface water, DEQ requests that projects incorporate construction best management practices (BMPs) to assist in the protection of Idaho's water resources. Additionally, please contact DEQ to identify BMP alternatives and to determine whether this project is in an area with Total Maximum Daily Load stormwater permit conditions.
- The Idaho Stream Channel Protection Act requires a permit for most stream channel alterations. Please contact the Idaho Department of Water Resources (IDWR), Western Regional Office, at 2735 Airport Way, Boise, or call (208) 334-2190 for more information. Information is also available on the IDWR website at: <https://idwr.idaho.gov/streams/stream-channel-alteration-permits.html>
- The Federal Clean Water Act requires a permit for filling or dredging in waters of the United States. Please contact the US Army Corps of Engineers, Boise Field Office, at 10095 Emerald Street, Boise, or call 208-345-2155 for more information regarding permits.
- For questions, contact Lance Holloway, Surface Water Manager, at (208) 373-0564.

5. SOLID WASTE, HAZARDOUS WASTE AND GROUNDWATER CONTAMINATION

- **Solid Waste.** No trash or other solid waste shall be buried, burned, or otherwise disposed of at the project site. These disposal methods are regulated by various state regulations including Idaho's Solid Waste Management Regulations and Standards (IDAPA 58.01.06), Rules and Regulations for Hazardous Waste (IDAPA 58.01.05), and Rules and Regulations for the Prevention of Air Pollution (IDAPA 58.01.01). Inert and other approved materials are also defined in the Solid Waste Management Regulations and Standards.
- **Hazardous Waste.** The types and number of requirements that must be complied with under the federal Resource Conservation and Recovery Act (RCRA) and the Idaho Rules and Standards for Hazardous Waste (IDAPA 58.01.05) are based on the quantity and type of waste generated. Every business in Idaho is required to track the volume of waste generated, determine whether each type of waste is hazardous, and ensure that all wastes are properly disposed of according to federal, state, and local requirements.

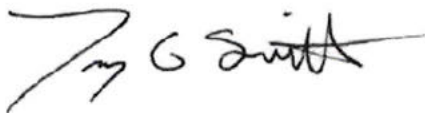

- **Water Quality Standards.** Site activities must comply with the Idaho Water Quality Standards (IDAPA 58.01.02) regarding hazardous and deleterious-materials storage, disposal, or accumulation adjacent to or in the immediate vicinity of state waters (IDAPA 58.01.02.800); and the cleanup and reporting of oil-filled electrical equipment (IDAPA 58.01.02.849); hazardous materials (IDAPA 58.01.02.850); and used-oil and petroleum releases (IDAPA 58.01.24.060 and 58.01.24.061). Petroleum releases must be reported to DEQ in accordance with IDAPA 58.01.24.060.01 and 58.01.24.061.04. Hazardous material releases to state waters, or to land such that there is likelihood that it will enter state waters, must be reported to DEQ in accordance with IDAPA 58.01.02.850.
- **Groundwater Contamination.** DEQ requests that this project comply with Idaho's Ground Water Quality Rules (IDAPA 58.01.11), which states that "No person shall cause or allow the release, spilling, leaking, emission, discharge, escape, leaching, or disposal of a contaminant into the environment in a manner that causes a ground water quality standard to be exceeded, injures a beneficial use of ground water, or is not in accordance with a permit, consent order or applicable best management practice, best available method or best practical method."
- For questions, contact Matthew Pabich, Waste & Remediation Manager, at (208) 373-0510.

6. ADDITIONAL NOTES

- If an underground storage tank (UST) or an aboveground storage tank (AST) is identified at the site, additional regulations may apply. If an UST is present, the site should be evaluated to determine whether the UST is regulated by DEQ. If an AST is identified, EPA may have additional requirements. Both UST and AST sites should be assessed to determine whether there is potential soil and ground water contamination. Please call DEQ at (208) 373-0550, or visit the DEQ website <https://www.deq.idaho.gov/waste-management-and-remediation/storage-tanks/leaking-underground-storage-tanks-in-idaho/> for assistance. If applicable to this project, DEQ recommends that BMPs be implemented for any of the following land uses: wash water from cleaning vehicles, fertilizers and pesticides, animal facilities, composted waste, ponds and outdoor gun ranges. Please contact DEQ for more information on any of these conditions.

We look forward to working with you in a proactive manner to address potential environmental impacts that may be within our regulatory authority. If you have any questions, please contact me, or any of our technical staff at (208) 373-0550.

Sincerely,

Troy Smith
Regional Administrator

Standard Final Plat Notes

- Floodplain Note:
FEMA FIRM panel(s): # _____ FIRM effective date(s): _____
Flood Zone(s): Zone _____ Base Flood Elevation(s): _____ (NAVD'88)
Flood Zones are subject to change by FEMA & all land within a floodway or floodplain is regulated by Title 9 and Title 11 of the Valley County Code.
- "Declaration of Installation of Utilities recorded as instrument # _____."
(shall reference electrical, phone, and fiber; along with a fire tank maintenance)
- "Declaration of Private Roads recorded as instrument # _____." (if applicable)
- "Shared Driveway Maintenance Agreement recorded as instrument # _____."
(if applicable)
- "Wildfire Urban Interface Protection Plan recorded as instrument # _____."
- "Development Agreement recorded as instrument # _____."
- "CCR's recorded as instrument # _____."
- "The Valley County Board of Commissioners have the sole discretion to set the level of service for any public road; the level of service can be changed."
- "All lighting must comply with the Valley County Lighting Ordinance."
- "Only one wood burning device per lot."
- "Surrounding land uses are subject to change."
- Note wetlands and riparian area overlays as "no build" area.
- "Easements recorded as instrument # _____." (show all easements)

Plats with Irrigation Water or within Irrigation District/Company Boundaries:

- This subdivision is subject to the provisions of Idaho Code Section 31-3805 (1) regarding the delivery of irrigation water.

Standard Condition of Approval for CCR recommendation, if recorded:

1. Shall address lighting, noxious weeds, septic maintenance, wildfire prevention, prohibiting yews in landscaping, dogs being a nuisance to adjacent agricultural uses, and limit each lot to one wood-burning device.
2. Shall provide for long-term maintenance of requirements identified in the Wildland Urban Interface Fire Protection Plan and memorialize any buried tanks and their continued maintenance.
3. Should address whether short-term rentals will be allowed per the HOA.

The installation of mercury vapor lamps is prohibited.

Flashing or intermittent lights, lights of changing degree of intensity, or moving lights shall not be permitted. This shall not be construed so as to prohibit holiday lights during the holiday season.

Sensor activated lights It is located in such a manner as to prevent glare and lighting onto properties of others or into a public right of way, set to only go on when activated and to go off within five (5) minutes after activation. The lights shall not be triggered by activity off the property.

Uplighting for flags is allowed provided the flag is of a government and the maximum lumen output is 1300 lumens. Flags are encouraged to be taken down at sunset to avoid the need for lighting. LED lighting shall not exceed 3000 degrees Kelvin.

Tod Costello Code Compliance
208-382-7145 ext., 1390

ALL OTHER OUTDOOR LIGHTING SHALL MEET THE FOLLOWING STANDARDS

The height of any light fixture or illumination source shall not exceed thirty feet (30').

All lighting or illumination units or sources **shall be hooded or shielded in a downward direction** so they do not produce glare or cause light trespass on any adjacent lot or real property as depicted in section Valley County Code 6-2-7.

Lights or illumination units shall not direct light, either directly or through a reflecting device, upon any adjacent lot or real property. **Lighting should not illuminate the sky or reflect off adjacent water bodies or produce glare or cause light trespass on any adjacent lot or real property.**

All outdoor lights used for parking areas, walkways, and similar uses mounted on poles eight feet (8') or greater in height shall be directed downward. The light source shall be shielded so that it will not produce glare or cause light trespass on any adjacent lot or real property.

**Outdoor Lighting
Dark Sky Compliance**

Valley County Code 6-2-5
PURPOSE

The purpose is to promote the health, safety and welfare, the quality of life, and the ability to view the night sky, by establishing regulations and a process for review of exterior lighting.

APPLICABILITY

These standards shall apply to all outdoor lighting including, but not limited to, search, spot, or flood light.

PERFORMANCE STANDARDS

All nonessential exterior commercial and residential lighting is encouraged to be turned off after business hours and/or when not in use. Lights on a timer are encouraged. Sensor activated lights are encouraged to replace existing lighting that is desired for security purposes.

Examples of Shielded Lights

NOTE : "Cannot See the Bulb"

Basic LED Colors/Kelvin Temperatures

Here are some examples of options to bring your lights into Dark Sky Compliance

Top 10 Ways to Be a Good Septic Owner

- ✓ Have your system inspected every three years by a qualified professional or according to your state/local health department's recommendations
- ✓ Have your septic tank pumped, when necessary, generally every three to five years
- ✓ Avoid pouring harsh products (e.g., oils, grease, chemicals, paint, medications) down the drain
- ✓ Discard non-degradable products in the trash (e.g., floss, disposable wipes, cat litter) instead of flushing them
- ✓ Keep cars and heavy vehicles parked away from the drainfield and tank
- ✓ Follow the system manufacturer's directions when using septic tank cleaners and additives
- ✓ Repair leaks and use water efficient fixtures to avoid overloading the system
- ✓ Maintain plants and vegetation near the system to ensure roots do not block drains
- ✓ Use soaps and detergents that are low-suds, biodegradable, and low- or phosphate-free
- ✓ Prevent system freezing during cold weather by inspecting and insulating vulnerable system parts (e.g., the inspection pipe and soil treatment area)

A Homeowner's Guide to Septic Systems

**Idaho Department of Environmental Quality
1410 N. Hilton
Boise, ID 83706**

January 2001

Do you have a home septic system? As an Idaho resident, there is a good chance you do—thirty-six percent of Idaho's homes, or about 210,000 residences, use septic systems to treat their sewage. These systems discharge more than 53 million gallons of wastewater into Idaho's soils annually, and this figure grows each year. In 1999, Idaho's seven health districts issued over 6,100 permits for new septic systems.

Septic systems dispose of household sewage, or wastewater, generated from toilet use, bathing, laundry, and kitchen and cleaning activities. Because septic systems are underground and seldom require daily care, many homeowners rarely think about routine operations and maintenance. However, if a septic system is not properly designed, located, constructed, and maintained, groundwater may become contaminated.

Household Wastewater

Households that are not served by public sewers depend on septic tank systems to treat and dispose of wastewater. Household wastewater carries with it all wastes that go down the drains in our homes, including human waste, dirt, food, toilet paper, soap, detergents, and cleaning products. It contains dissolved nutrients, household chemicals, grease, oil, microorganisms (including some that cause disease), and solid particles. If not properly treated by your septic system, chemicals and microorganisms in wastewater can travel through the soil to groundwater and pose a health hazard.

The average person uses between 50 and 75 gallons of water per day; mostly in the bathroom. Reducing your water use will help your septic system to work more efficiently.

Your Septic System

A conventional septic system has three working parts: a septic tank, a drainfield, and surrounding soil.

Septic Tank

Septic tanks can be made of concrete, fiberglass, or plastic and must be approved by the state. Minimum sizes of tanks have been established for residences based on the number of bedrooms in the dwelling. In Idaho, a 1,000-gallon septic tank is required for homes with three or four bedrooms. Larger tanks are required for larger homes. Local district health departments issue permits for septic systems and specify the minimum size tank. Some systems installed before the current rules and regulations may have smaller septic tanks.

A septic tank has three main functions:

- to remove as many solids as possible from household wastewater before sending the liquid, called "effluent," to a drainfield;
- to decompose solids in the tank; and
- to store solids that do not decompose.

When raw wastewater enters the tank, heavy solids sink to the bottom of the tank as sludge. Light solids, such as grease and paper, float to the surface as scum. During the wastewater storage period, bacteria digest organic material in the wastewater. During this process, the solid material is reduced in volume and composition. Solids that do not decompose accumulate in the tank and eventually must be pumped out.

Tees, or baffles, are provided at the tank's inlet and outlet pipes. The inlet tee slows the incoming wastes and reduces disturbance of the settled sludge. The outlet tee keeps the solids and scum in the tank. As new wastewater enters the tank through the inlet tee, an equal amount of wastewater is pushed out of the tank through the outlet tee. The effluent that leaves the tank has been partially treated but still contains disease-causing bacteria and other pollutants.

Drainfield

Each time raw wastewater enters the tank it forces an equal amount of effluent into a drainfield. A standard drainfield is composed of a series of perforated pipes buried in gravel-filled trenches in the soil. The effluent seeps out of the perforated pipes and percolates through the gravel to the soil.

Soil

The soil below the drainfield provides the final treatment and disposal of the septic tank effluent. After the effluent has passed into the soil, most of it percolates downward and outward, eventually entering the groundwater. Soils are critical to the treatment of septic tank wastewater.

A system that is not functioning properly will release nutrient-rich and bacterial-laden wastewater into the groundwater and/or surface water. These contaminated waters pose a significant public health threat to people that come into contact with them. Wastewater that moves with groundwater can transport bacteria considerable distances. This can result in a threat to public health and adversely affect the quality of ground and surface waters.

Caring for Your Septic System

Installing Your System

In order to have a septic system installed on your property, you must first obtain a permit. Permit applications are available from your local district health department. Next, you must have a site evaluation performed. Make arrangements for this with your district health department and with a licensed septic system installer. Note that not all property is suitable for septic systems, so some permits may be denied. It is recommended that you have a site evaluation performed before you purchase property. Finally, have your system installed by a licensed installer and inspected by your local health district. Provide regular, preventative, maintenance to keep your system running smoothly.

Inspecting Your System

When too much sludge and scum are allowed to accumulate in your tank, the incoming sewage will not have enough time in the septic tank for solids to settle. Solids may flow to the drainfield and clog the pipes, causing the sewage to overflow to the ground surface, where it exposes humans and animals to disease-causing organisms. To prevent this from happening, it is very important to inspect your tank regularly and have it serviced when needed. All tanks have accessible manholes for inspecting and pumping. Some excavation work may be needed to uncover the manhole.

Properly designed tanks should have enough capacity for three to eight years of use before needing service. This is dependent upon the amount of wastewater generated. It is recommended that an average family of four have its septic tank pumped out every three to five years. Don't wait for signs of system failure to have your tank pumped. Your tank should be checked annually to measure sludge and scum levels. A licensed septic tank pumper can provide a septic tank inspection and recommend when the tank should be pumped. A tank inspection should include measuring the depth of scum and sludge and inspecting the tees in the septic tank.

If you do the inspection yourself, it is important to understand that septic tanks always appear full because both the inlet and the outlet are at the top of the tank. What you will need to know is how much of the tank's volume is being taken up by scum and sludge. When sludge and scum take up more than 35 percent of the tank volume, these solids need to be removed by pumping. A pole wrapped in a coarse weave cloth can be used to check the sludge depth. An extension on the pole can be used to measure the scum depth. Record these measurements as part of your pumping records. To check the tees, uncover the inspection ports.

Never allow anyone to enter your septic tank. Dangerous gases and the lack of oxygen can kill in minutes.

While it is impractical to inspect the pipes in your drainfield, it is important to watch for drainfield failure or overuse. See "Warning Signs of System Failure" in this booklet for information.

Maintaining Your System

Pumping your septic tank every three years (or as determined by your inspections) will remove accumulations of solids, help keep the drainfield from becoming clogged, and help prevent you from experiencing sewage backups or septic system failure. An accumulation of sludge exceeding 35% of the total water depth in the septic tank could cause solids to enter the drainfield and clog the system. Hire a licensed septic tank pumper to pump your tank for you.

Mapping Your System

In order to take proper care of your septic system, you must know the location of the septic tank and drainfield. The location of your septic tank can be determined from plot plans, septic system inspection records, architectural or landscape drawings, or from observations of the house plumbing. If you do not have access to drawings, find where the sewer pipe leaves your house. Some installers mark the location where the waste pipe comes out of the house with an "S" on the foundation. You may want to do this as well. Probe in the ground 10 to 15 feet directly out from the location where the pipe leaves your house to find your tank.

Once the septic tank has been located, make several plot plan diagrams (with measurements) that include a rough sketch of your house, septic tank cover, drainfield area, well, and any other permanent reference points (such as trees or large rocks) and place them with your important papers. You'll find a sample system diagram on the next page, and a place to draw your own inside the front cover of this booklet. You may also want to hang a diagram in your garage and provide one to your local district health office.

Maintain a permanent record of any septic system maintenance, repair, sludge and scum levels, pumping, drainfield condition, household backups, and operations notes.

Create a septic system diagram, similar to this one, for your system.

Warning Signs of System Failure

While proper use, inspections, and maintenance should prevent most septic tank problems, it is still important to be aware of changes in your septic system and to act immediately if you suspect a system failure. There are many signs of septic system failure:

- surfacing sewage or wet spots in the drainfield area;
- plumbing or septic tank backups;
- slow draining fixtures;
- gurgling sounds in the plumbing system;
- sewage odors in the house or yard (note that the house plumbing vent on the roof will emit sewage odors and this is normal); and
- tests showing the presence of bacteria in well water.

If you notice any of these signs, or if you suspect your septic tank system may be having problems, contact a licensed septic system professional or your local district health agency for assistance.

Septic System Dos and Don'ts

Proper operation of a septic system can prevent costly repairs or replacement. Observing the following guidelines will help to keep your system running efficiently.

Do

- ...practice water conservation. The more wastewater you produce, the more wastewater your system must treat and dispose. By reducing and balancing your use, you can extend the life of your system and avoid costly repairs.
 - Use water saving devices such as low flow showerheads.
 - Repair leaky faucets and plumbing fixtures immediately.
 - Reduce toilet reservoir volume or flow.
 - Take short showers.
 - Take baths with a partially filled tub.
 - Wash only full loads of dishes and laundry.
 - Shut off the water while shaving or brushing your teeth.
 - Balance your water use (e.g., avoid washing several loads of laundry in one day).
- ...keep accurate records. Know where your septic tank is, keep a diagram of its location using the space provided in this booklet, and keep a record of system maintenance.
- ...inspect your system annually. Check the sludge and scum levels inside the tank and periodically check the drainfield for odors, wet spots, or surfacing sewage.
- ...pump your system routinely. Pumping your septic tank is probably the single most important thing you can do to protect your system.
- ...keep all runoff away from your system. Water from roofs and driveways should be diverted away from the septic tank and drainfield area. Soil over your system should be mounded slightly to encourage runoff.
- ...protect your system from damage. Keep vehicles and livestock off your drainfield. The pressure can compact the soil or damage the pipes. Before you dig for any reason, check the location of your system and drainfield area.
- ...landscape your system properly. Plant grass over the drainfield area. Don't plant trees or shrubs or place impermeable materials, such as concrete or plastic, over the drainfield.
- ...use cleaning chemicals in moderation and only according to manufacturer's directions.

Don't

- ...flood irrigate over your system or drainfield area. The best way to irrigate these areas is with sprinklers.
- ...use caustic drain openers for clogged drains. Use boiling water or a drain snake to clean out clogs.
- ...enter a septic tank. Poisonous gases or a lack of oxygen can be fatal.
- ...use septic tank additives. They are not necessary for the proper functioning of your tank and they do not reduce the need for pumping. In fact, some additives can even harm your system.
- ...flush harmful materials into your tank. Grease, cooking oil, coffee grounds, sanitary napkins, and cigarettes do not easily decompose in septic tanks. Chemicals, such as solvents, oils, paints, and pesticides, are harmful to your systems operation and may pollute groundwater.
- ...use a garbage disposal. Using a garbage disposal will increase the amount of solids entering the septic tank and will result in the need for more frequent pumping.
